		Page
The electronic engineer of the Seventies	Alberto Socolovsky	9
A popular communications link is in danger	Alberto Socolovsky	9
Challenge: Planned parenthood for new electronic companies	John McNichol	36
All word generators are not women	Jerry Heyer	42
Commercially available word generators	Stephen A. Thompson	47
Four ways to get active....with filters	Harmon G. Washington	50
Sweep measurements cut costs	Walter White Jr.	57

IC ideas:

Voltage regulator has extended range, remote shutdown	Walter G. Jung	66
Add-on network improves op-amp bandwidth and slew rate	Brent Welling	67
Stable square wave generator	Arnold J. Steinman	67
Low cost voltage regulator from one IC	Les Toth	68
For a square-law transfer function, try this op amp connection	Robert P. Hennick	68
Regulated supply has two outputs	Don Purland	69
Collector junction compensates current source in this differential amplifier	Walter G. Jung	69
Make a crystal-controlled clock with DTL gates	Richard Juengel	70
Threshold testing too tedious? Automate	R. K. Repass	70
Bidirectional ripple counter counts up or down	Robert G. Burlingame	71
Digital filter replaces bulky components	Mario Humberto Acuna	71
TTL memories get faster, smaller, and cheaper	Staff Report	77
ISSCC - 1970	Staff Report	81

February

MOS is ripe, but tender	Alberto Socolovsky	9
"Sandwich" has remote control possibilities	Staff Report	12
Getting Rich	John McNichol	30
Guide to integrated circuits		35
MOS integrated circuits: A six-part course	Arthur J. Boyle	55
The first MOS	Alberto Socolovsky	56
MOS course - Part 1, The basic structures	E. Marshall Wilder	58
Circuit design: The op amp way	C. J. Huber	67

IC ideas:

Single-pulse generator steps digital systems	Jeffrey Lowenson	78
Switching-mode heater control	Dennis R. Morgan	78
Variable-modulus counter	Ron Kostenbauer	79
Digital gain control for op amps	William E. Peterson	79

February (cont'd)

Mil-Std-220A for filters needs updating . . . . . John E. Hickey, Jr. 84
Motorola antes up the chips . . . . . Staff Report 89
Function generators become more universal . . . . . Staff Report 92

March

Think and do . . . . . Alberto Socolovsky 9
A test fixture is worth a thousand words . . . . . Alberto Socolovsky 9
It's a show; it's a convention; it's IEEE time again!. . . . . Staff Report 24
Guide to thick film hybrid circuit design 35
Challenge: Is there an operation breakthrough for electronic engineers?. . . John McNichol 46
MOS course - Part 2, The MOS circuits . . . . . Arthur J. Boyle 55
Doing logic with MOS . . . . . William Penney 56
MOS shift registers . . . . . George Landers 59
Four-phase logic . . . . . Lee L. Boysel, Cloyd E. Marvin, Joe Murphy, and Jim Sorenson 63
Computer-aided design . . . . . Frank Schenstrom and Robert Williams 70
Oscillators and function generators revisited . . . . . Staff Report 75

IC ideas:

Simple one-shot multivibrator . . . . . C. Musquetier 84
Gated latch retains GO/NO GO information . . . . . Aaron Mall and C. H. Doeller III 84
Feedback eliminates switch contact transients . . . . . Veikko Jaakola 85
Coincident pulse eliminator . . . . . John M. Irwin 85

Pulse system components reach 125-MHz rep rate . . . . . Staff Report 92

April

Electronic isolationism by default . . . . . Alberto Socolovsky 9
Copy is "spotted" with fiber optics . . . . . Staff Report 12
Electrical integration - a step closer to molecular electronics? . . . . . Staff Report 32
Is anybody out there? . . . . . John McNichol 42
Guide to dc power supply selection 53
MOS course - Part 3, Applications of MOS circuits . . . . . Arthur J. Boyle 61
Interfacing MOS and bipolar logic . . . . . Tom Reynolds 62
MOS arrays in a data terminal . . . . . Richard Perrin 67
MOS shift registers in arithmetic operations . . . . . Jack Irwin 71
Modern techniques of analog multiplication . . . . . Tom Cate 75
Variable frequency multivibrator has wide range . . . . . R. J. Surprenant 83

IC ideas:

Low frequency sine wave crystal oscillator . . . Richard S. Baggett 88
Op amp makes unique one-shot . . . . . Maxwell G. Strange 88
TTL compatible lamp driver . . . . . Hal Koester 90

IC ideas: (cont'd)

Zero input impedance preamp . . . . . Albert E. Hayes 90
One-shot triggers on both edges of input . . . . . Ken Erickson 92
Op amp phase shifter for 0 or 180° . . . . . Irwin Cohen 92

Low-frequency sweepers beat their way upstream . . . . . Staff Report 98
Latch on to phase-locked loops . . . . . Staff Report 102

May

The majority carriers need your help . . . . . Alberto Socolovsky 9
Challenge: You can't get there from here! . . . . . John McNichol 30
MOS course - Part 4, Complementary MOS . . . . . Arthur J. Boyle 51
Complementary MOS logic and applications . . . . . S. S. Eaton 52
Design shortcuts for microwave frequency dividers . . . . . Willie Joseph Goldwasser 61

IC ideas:

Binary number comparator . . . . . C. H. Hall, Jr. 68
Triflop - A three-state memory element . . . . . Anatole Turecki 68
Digital frequency doubling . . . . . David L. Sporre 70

How to select a time-sharing service . . . . . Alan G. Hammersmith C-2
Available time-sharing services . . . . . Staff Report C-5

June

No, Virginia, you are too big for Santa Claus . . . . . Alberto Socolovsky 9
Simple, three-layer structure can do IC functions . . . . . Staff Report 12
100,000-bit ROM is quick as a flash! . . . . . Staff Report 14
Three-pole active filter . . . . . Russell Kincaid 46
Printed circuits - make or buy? . . . . . Jack Froelich 51
Speed/power chart for digital ICs . . . . . Staff Report 58
MOS course - Part 5, Random access memories . . . . . Arthur J. Boyle 63
MOS random-access memories . . . . . Warren Crews 66
Static or dynamic - two ways to remember . . . . . Marcian E. Hoff, Jr. 72
Performance and cost trade-offs for MOS RAMs . . . . . Vernon G. McKenny 76
Frequency synthesizing with the phase locked loop . . . . . Ed Renschler and Brent Welling 84
Guide to nonlinear circuits 97

IC ideas:

Clock rate limit circuit . . . . . Stephen Faris 109
BCD to 9's complement converter . . . . . Ken Erickson 109
Noise-insensitive monostable multivibrators . . . . . E. G. Faris 110
Super-simple square-wave generator . . . . . Paul Franson 113

New keyboard simplifies electronics . . . . . Staff Report 115

July

No time for dropouts . . . . . Alberto Socolovsky 9
Memories are made of this--two diodes . . . . . Staff Report 10
Programmed to tell time . . . . . Staff Report 12
Challenge: Innovating for the 21st century . . . . . John McNichol 30
Optoelectronics course - Part 1, A new era for semiconductors . . . . . John C. Haenichen 40
Optoelectronics course - Part 1, The Basics . . . . . Lin C. Wetterau, Jr. and Dr. Robert L. Williams 43
Guide to optoelectronic devices 49
IC op amp selection charts . . . A. Boyle, L. Rothstein, and D. Wilkins 57
MOS course - Part 5B, Read-only memories . . . . . Arthur J. Boyle 63
Performance and convenience trade-offs for MOS read-only memories . . . Dr. Robert J. Proebsting 64

IC ideas:

Simple high duty cycle one-shot . . . . . Parviz Ghajar 72
Ctµl buffer as a digital line driver/receiver . . . Raymond S. Lim 72
Ripple counter has fixed delay for any count . . . S. S. Golenski 75
Simple word gate circuit . . . . . W. K. Lenhardt 75

High-speed DVM reads true rms values . . . . . Staff Report 82

August

The jobs that were . . . . . Alberto Socolovsky 6
Is it a battery or a capacitor? . . . . . Stephen A. Thompson 12
WESTON - keeping with the times . . . . . Stephen A. Thompson 24
Optoelectronics course - Part 2A. Let the light shine out . . . . . Dr. Robert Haisty 29
Optoelectronics course - Part 2A, Emitter packaging and performance . . Dr. Michael G. Coleman, Richard W. Gurtler and Arnold London 36
MOS course - Part 5C, Associative memories . . . . . Arthur J. Boyle 53
MOS associative memories . . . . . Leon D. Wald 54
Designing wideband amplifiers: Let the computer help . . . . . John A. Eisenberg 59

IC ideas:

Pulse rate filter . . . . . Quon S. Chow 65
Low frequency function generator . . . . . Barry Schwartz 65
Next pulse synchronizer . . . . . Don M. Evans 68
Digital AFSK discriminator Arleigh B.Baker 68

All solid-state true rms arrives . . . . . Staff Report 70
Micropower op amp . . . . . Staff Report 72

September

Who speaks for EEs in times of crisis? . . . . . Alberto Socolovsky 7
Rate gyro is a vibrating thing . . . . . Staff Report 12
Challenge: The glory days are over at DoD . . . . . John McNichol 30
Connector and termination selection guide 37
MOS course - Part 5D, Memory costs . . . . . Arthur J. Boyle 49
Semiconductor memory systems - what will they cost? . . . . . Thomas W. Hart, Jr. and Donald D. Winstead 50
Testing integrated circuits . . . . . Sheldon Edelman 58
Optoelectronics course - Part 2B, Devices sense light . . . . . Lin Wetterau, Millis Miller, and Dr. Robert Haisty 71

IC ideas:

Minimum hardware decade counter . . . . . M. V. Pitke 84
Simple priority detector . . . . . Bill Wiley Smith 84
Sine wave oscillator has logic level output . . . Walter G. Jung 85

Poor packaging produces problems . . . . . Joseph DiCerto 91

October

A call for action . . . . . Alberto Socolovsky 6
Wire and cable reference chart 17
Where are the new jobs for EEs? . . . . . Deborah P. Wilkins 32
MOS course - Part 6, Testing MOS . . . . . Arthur J. Boyle 41
Testing complex MOS: the how and why . . . . . Ron Danklefs and Homer Thornton 42
Hybrid resistor trimming: an industry report . . . . . Stephen A. Thompson 48
Optoelectronics course - Part 3A, Application ideas . . . . . John E. Hickey, Jr. 59

IC ideas:

How to gain access to a synchronous device anytime . . . . . Don Femling 66
Simple square wave generator uses one IC . . . . Henry D. Olson 66
CCO uses voltage regulator as a comparator . . . Sam Ben-Yaakov 67

Digital filters become commercial . . . . . Staff Report 68
Multi-octave rf amplifiers in TO-8 cans . . . . . Staff Report 71

November

Not to help is to hurt . . . . . Alberto Socolovsky 6
Hour of decision at the FCC . . . . . John McNichol 22
Data terminals: A special report . . . . . Staff Report D1
Creative doodling made easy: CRT terminals . . . . . William H. Sass and Harold S. Ramussen D3

November (cont'd)

Review of interactive CRT terminals . . . . . Editorial Staff, Instruments and Control Systems D9

IC ideas

Man-machine interface circuit . . . . . Alphonso H. Marsh, Jr. 52
Circuit performs up/down counting and shifting . . . Ken Erickson 52
Versatile triangle wave generator . . . . . Adrian Moses 53
Oven temperature controller . . . . . S. W. Billingsley 53

What's your MOS IQ? . . . . . Arthur J. Boyle 83

December

Jobs, concern and leadership . . . . . Alberto Socolovsky 6
Guide to main frame memories chart 17
A way of thinking about memories . . . . . Stephen A. Thompson 30
Pomeroy's complaint . . . . . Roger D'Aprix 43
More application ideas . . . . . John E. Hickey, Jr. 49
Measure impedance the easy way--use a vector voltmeter . . . J. R. Heck 54

IC ideas

A sure start square wave oscillator. .Jack Cramer and Ed Matsumoto 60
A low cost microwave field strength meter. . . . . J. Agnew 60
Convert BCD 8421 to self-complementing BCD 2421. . . J. V. Sastry 61
Midvalue selector doubles as a precise voltage limiter, Adrian Moses 61

Subject Index — Month & Page No.

Amplifiers

Circuit design: The op amp way . . . . . C. J. Huber 2-67
Designing wideband amplifiers: Let the computer help . . . . . John Eisenberg 8-59
Four ways to get active...with filters . . . . Harmon G. Washington 1-50
IC op amp selection charts . . . . . A. Boyle, L. Rothstein, and D. Wilkins 7-57
Micropower op amp . . . . . Staff Report 8-72
Multi-octave rf amplifiers in TO-8 cans . . . . . Staff Report 10-71

Careers

Getting rich . . . . . John McNichol 2-30
The glory days are over a DoD . . . . . John McNichol 9-31
The hour of decision at the FCC . . . . . John McNichol 11-22
Innovating for the 21st century . . . . . John McNichol 7-30
Is anybody out there? . . . . . John McNichol 4-42
Is there an operation breakthrough for electronic engineers . . . . John McNichol 3-46
Planned parenthood for new electronic companies . . . John McNichol 1-36
Pomeroy's complaint . . . . . Roger D'aprix 12-43
Where are the new jobs for EE's? . . . . . Deborah Wilkins 10-32
You can't get there from here! . . . . . John McNichol 5-30

Charts and nomographs

Connector and termination selection guide 9-37
Guide to dc power supply selection 4-53
Guide to integrated circuits 2-35
Guide to main frame memories chart 12-17
Guide to nonlinear circuits 6-97
Guide to optoelectronic devices 7-49
Guide to thick film hybrid circuit design 3-35
IC op amp selection chart . . . . . A. Boyle, L. Rothstein, and D. Wilkins 7-57
Speed/power chart for digital ICs 6-58
A way of thinking about memories . . . . . Stephen A. Thompson 12-30
Wire and cable reference chart 10-17

Circuit design

Circuit design: The op amp way . . . . . C. J. Huber 2-67
Designing wideband amplifiers Let the computer help . . . . . John Eisenberg 8-59
Four ways to get active...with filters Harmon G. Washington 1-50

Circuit design (cont'd)

Hybrid resistor trimming: An industry report . . . . . Stephen A. Thompson 10-48
IC op amp selection chart . . . . . A. Boyle, L. Rothstein, and D. Wilkins 7-57
Modern techniques of analog multiplication . . . . . Tom Cate 4-75
Three pole active filter . . . . . Russell Kincaid 6-46
Variable frequency multivibrator has wide range. . R. J. Surprenant 4-83

Circuit theory

Circuit design . . . . . C. J. Huber 2-67
Four ways to get active...with filters . . . . Harmon G. Washington 1-50
Guide to nonlinear circuits 6-97
Measure impedance the easy way--use a vector voltmeter . . . . . J. R. Heck 12-54
Testing integrated circuits . . . . . Staff Report 9-58
Variable frequency multivibrator has wide range. . R. J. Surprenant 4-83

Communications

Copy is "spotted" with fiber optics . . . . . Staff Report 4-12
Digital filters become commercial . . . . . Staff Report 10-68
Frequency synthesizing with the phase locked loop . . . . . Ed Renschler and Brent Welling 6-84
Latch on to phase-locked loops . . . . . Staff Report 4-102
Sweep measurements cut costs . . . . . Walter White, Jr. 1-57

Computers

Complementary MOS logic and applications . . . . . S. S. Eaton 5-52
Modern techniques of analog multiplication . . . . . Tom Cate 4-75
A way of thinking about memories . . . . . Stephen A. Thompson 12-30

Computers and peripherals

Available time-sharing services . . . . . Staff Report 5-C5
Complementary MOS logic and applications . . . . . S. S. Eaton 5-52
Computer-aided design . . . . . Frank Schenstrom and Robert Williams 3-70
Creative doodling made easy: CRT terminals . . . . . William H. Sass and Harold S. Rasmussen 11-D3
Data terminals: A special report . . . . . Staff Report 11-D1
Doing logic with MOS . . . . . William Penney 3-56
The first MOS . . . . . Alberto Socolovsky 2-56
Four-phase logic Lee L. Boysel, Cloyd E. Marvin, Joe Murphy, and Jim Sorenson 3-63

Computers and peripherals (cont'd)

Guide to main frame memories chart 12-17
How to select a time-sharing service . . . . . Alan G. Hammersmith 5-C2
Interfacing MOS and bipolar logic . . . . . Tom Reynolds 4-62
Memories are made of this--two diodes . . . . . Staff Report 7-10
MOS arrays in a data terminal . . . . . Richard Perrin 4-67
MOS associative memories . . . . . Leon D. Wald 4-54
MOS course - Part 1, The basic structures . . . E. Marshall Wilder 2-58
MOS integrated circuits: A six-part course . . . . Arthur J. Boyle 2-55
MOS random-access memories . . . . . Warren Crews 6-66
MOS shift registers . . . . . George Landers 3-59
MOS shift registers in arithmetic operations . . . . . Jack Irwin 4-71
100,000-bit ROM is quick as a flash! . . . . . Staff Report 6-14
Performance and convenience trade-offs for MOS read-only memories . Dr. Robert J. Proebsting 7-64
Performance and cost trade-offs for MOS RAMs . . Vernon G. McKenney 6-76
Review of interactive CRT terminals Staff Report Instrument and Control Systems 11-D9
Semiconductor memory systems--what will they cost? . . . . . Donald D. Winstead and Thomas Hart 9-50
Static or dynamic--two ways to remember . . . . . Marcian E. Hoff 6-72
Testing complex MOS: The how and why . . . . . Ron Danklefs and Homer Thornton 10-42
Time sharing: A special report . . . . . Staff Report 5-C1
TTL memories get faster, smaller, and cheaper . . . . Staff Report 1-77
What's your MOS IQ? . . . . . Arthur J. Boyle 11-83

Data acquisition and processing

Available time-sharing services . . . . . Staff Report 5-C5
Digital filters become commercial . . . . . Staff Report 10-68
How to select a time-sharing service . . . . . Alan G. Hammersmith 5-C2
Modern techniques of analog multiplication . . . . . Tom Cate 4-75
New keyboard simplifies electronics . . . . . Staff Report 6-115
Time sharing: A special report . . . . . Staff Report 5-C1

Digital design

All word generators are not women . . . . . Jerry Heyer 1-42
The basic structures . . . . . E. Marshall Wilder 2-58
Commercially available word generators . . . . Stephen A. Thompson 1-47
Computer-aided design . . . . Frank Schenstrom and Robert Williams 3-70
Doing logic with MOS . . . . . William Penney 3-56
Frequency synthesizing with the phase locked loop . . . . . Ed Renschler and Brent Welling 6-84
Four-phase logic . . . . . Lee L. Boysel, Cloyd E. Marvin, Joe Murphy, and Jim Sorenson 3-63
Interfacing MOS and bipolar logic . . . . . Tom Reynolds 4-62
MOS arrays in a data terminal . . . . . Richard Perrin 4-67
MOS associative memories . . . . . Leon D. Wald 8-54
MOS random-access memories . . . . . Warren Crews 6-66
MOS shift registers . . . . . George Landers 3-59

MOS shift registers in arithmetic operations . . . . . Jack Irwin 4-71
Performance and convenience trade-offs for MOS read-only memories . . . . Dr. Robert J. Proebsting 7-64
Performance and cost trade-offs for MOS RAMs . . . . . Vernon G. McKenny 6-76
Semiconductor memory systems--What will they cost? . . . . . Thomas W. Hart, Jr. and Donald D. Winstead 9-50
Speed/power chart for digital ICs 6-58
Static or dynamic--two ways to remember . . . . . Marcian E. Hoff 6-72
Testing complex MOS: The how and why . . Ron Danklefs and Homer Thornton 10-42
What's your MOS IQ?. . . . . Arthur J. Boyle 11-83

Instruments and measurements

All solid-state true rms arrives . . . . . Staff Report 8-70
All word generators are not women . . . . . Jerry Heyer 1-42
Commercially available word generators . . . . . Stephen A.Thompson 1-47
Digital filters become commercial . . . . . Staff Report 10-68
Function generators become more universal . . . . . Staff Report 2-92
High-speed DVM reads true rms values . . . . . Staff Report 7-82
Hybrid resistor trimming: An industry report . . . . Stephen A. Thompson 10-48
Low-frequency sweepers beat their way upstream . . . . . Staff Report 4-98
Measure impedance the easy way--use a vector voltmeter . . . . J. R. Heck 12-54
oscillators and function generators revisited . . . . . Staff Report 3-75
Programmed to tell time . . . . . Staff Report 7-12
Sweep measurements cut costs . . . . . Walter White, Jr. 1-57
Testing integrated circuits . . . . . Staff Report 9-58

Integrated circuits

Circuit design: The op amp way . . . . . C. J. Huber 2-67
Complementary MOS logic and applications . . . . . S. S. Eaton 5-52
Computer-aided design . . . . . Frank Schenstrom and Robert Williams 3-70
Design shortcuts for microwave frequency dividers . . Willie J. Goldwasser 5-61
Doing logic with MOS . . . . . William Penney 3-56
Electrical integration--step closer to molecular electronics? . . . . . Staff Report 4-32
Four ways to get active...with filters... . . . . Harmon G. Washington 1-50
Four-phase logic . . . . . Lee Boysel, Cloyd Marvin, Joe Murphy and Jim Sorenson 3-63
Frequency synthesizing with the phase locked loop . . . . . Ed Renschler and Brent Welling 6-84
Guide to integrated circuits 2-35
Guide to thick film hybrid circuit design 3-35

Interfacing MOS and bipolar logic . . . . . Tom Reynolds 4-62
Latch on to phase-locked loops . . . . . Staff Report 4-102
Micropower op amp . . . . . Staff Report 8-72
MOS arrays in a data terminal . . . . . Richard Perrin 4-67
MOS associative memories . . . . . Leon D.Wald 8-54
MOS course - Part 1, The basic structures . . . . . E. Marshall Wilder 2-58
MOS random-access memories . . . . . Warren Crews 6-66
MOS shift registers . . . . . George Landers 3-59

MOS shift registers in arithmetic operations . . . . . Jack Irwin 4-71
Motorola antes up the chips . . . . . Staff Report 2-89
Multi-octave rf amplifiers in TO-8 cans . . . . . Staff Report 10-71
Performance and convenience trade-offs for MOS read-only memories . . . . Dr. Robert J. Proebsting 7-64
Performance and cost trade-offs for MOS RAMs . . . . . Vernon G. McKenney 6-76
Programmed to tell time . . . . . Staff Report 7-12
Semiconductor memory systems--what will they cost? . . . . . Thomas W. Hart, Jr. and Donald D. Winstead 9-50
Simple, three-layer structure can do IC functions . . . . . Staff Report 6-12
Speed/power chart for digital ICs 6-58
Static or dynamic--two ways to remember . . . . . Marcian E. Hoff 6-72
Testing complex MOS: the how and why . . . . . Ron Danklefs and Homer Thornton 10-42
Testing integrated circuits . . . . . Staff Report 9-58
TTL memories get faster, smaller and cheaper . . . . . Staff Report 1-77
A way of thinking about memories . . . . . Stephen A. Thompson 12-30
What's your MOS IQ? . . . . . Arthut J. Boyle 11-83

Materials

Hybrid resistor trimming: An industry report . . . . Stephen A. Thompson 10-48
Is it a battery or a capacitor? . . . . . Stephen A. Thompson 8-12
Printed circuits--make or buy? . . . . . Jack Froelich 6-51
Simple, three-layer structure can do IC functions . . . . . Staff Report 6-12

Microwaves and microwave products

Design shortcuts for microwave frequency dividers . . . . . Willie Joseph Goldwasser 5-61
Designing wideband amplifiers: let the computer help . . . . . John A. Eisenberg 8-59
Sweep measurements cut costs . . . . . Walter White, Jr. 1-57

Optoelectronic devices

Application ideas . . . . . John E. Hickey, Jr. 10-59
The basics Lin C. Wetterau, Jr. and Dr. Robert L. Williams 7-43
Devices sense light . . . . . Lin Wetterau, Millis Miller, and Dr. Robert Haisty 9-71
Emitter packaging and performance . . . . . Michael Coleman, Richard W. Gurtler, and Anrold London 8-36
Let the light shine out . . . . . Dr. Robert Haisty 8-29
More application ideas . . . . . John E. Hickey, Jr. 12-49
A new era for semiconductors John E.Haenichen 7-40

Oscillators

Function generators become more universal . . . . . Staff Report 2-92
Oscillators and function generators revisited . . . . . Staff Report 3-75
Pulse system components reach 125-MHz rep rate . . . . . Staff Report 3-92
Variable frequency multivibrator has wide range . . . . R. J. Surprenant 4-83

Packaging

Hybrid resistor trimming: An industry report	Stephen A. Thompson	10-48
Motorola antes up the chips	Staff Report	2-89
Poor packaging produces problems	Joseph DiCerto	9-91
Printed circuits -- make or buy?	Jack Froelich	6-51

Passive components

Connector and termination selection guide		9-37
Hybrid resistor trimming: An industry report	Stephen A. Thompson	10-48
Is it a battery or a capacitor	Stephen A. Thompson	8-12
Mil-Std-200A for filters needs updating	John E. Hickey, Jr.	2-84
New keyboard simplifies electronics	Staff Report	6-115
Wire and cable reference chart		10-17

Semiconductors

Application ideas	John E. Hickey, Jr.	10-59
The basics	Lin C. Wetterau, Jr. and Dr. Robert L. Williams	7-43
Devices sense light	Lin Wetterau, Millis Miller, and Dr. Robert Haisty	9-71
Emitter packaging and performance	Michael Coleman, Richard W. Gurtler, and Arnold London	8-36
The first MOS	Alberto Socolovsky	2-56
IC op amp selection chart	A. Boyle, L. Rothstein, and D. Wilkins	7-57
Let the light shine out	Dr. Robert Haisty	8-29
Memories are made of this--two diodes	Staff Report	7-10
More application ideas	John E. Hickey, Jr.	12-49
A new era for semiconductors	John C. Haenichen	7-40
"Sandwich" has remote control possibilities	Staff Report	2-12
A way of thinking about memories	Stephen A. Thompson	12-30

Testing

All word generators are not women	Jerry Hayer	1-42
Commercially available word generators	Stephen A. Thompson	1-47

IC ideas

Add-on network improves op amp bandwidth and slew rate. . . Brent Welling 1-67
BCD to 9's complement converter . . . . . Ken Erikson 6-109
Bidirectional ripple counter counts up or down . . . . . Robert G. Burlingame 1-71
Binary number comparator . . . . . C. H. Hall, Jr. 5-68
CCO uses voltage regulator as a comparator . . . . . Sam Ben-Yaakov 10-67
Circuit performs up/down counting and shifting . . . . . Ken Erickson 11-52
Clock rate limit circuit . . . . . Stephen Faris 6-109
Coincident pulse eliminator . . . . . John M. Irwin 3-85
Collector junction compensates current source in this differential amplifier . . . . . Walter G. Jung 1-69
Convert BCD 8421 to self-complementing BCD 2421 . . . . . J. V. Sastry 12-61
CTµl buffer as a digital line driver/receiver . . . . . Raymond S. Lim 7-72
Digital AFSK discriminator . . . . . Arleigh B. Baker 8-68
Digital filter replaces bulky components . . . . . Mario Humberto Acuna 1-71
Digital frequency doubling . . . . . David L. Sporre 5-70
Digital gain control for op amps . . . . . William E. Peterson 2-79
Dual bootstrapping improves amplifier performance . . . . Basil T. Barber 5-73
Feedback eliminates switch contact transients Veikko Jaakola 3-85
For a square-law transfer function, try this op amp connection . . . . . Robert P. Hennick 1-68
Gated latch retains GO/NOGO information . . . . . Aaron Mall and C. H. Doeller III 3-84
How to gain access to a synchronous device anytime . . . . . Don Fleming 10-66
A low cost microwave field strength meter . . . . . J. Agnew 12-60
Low cost voltage regulator from one IC . . . . . Les Toth 1-68
Low frequency function generator . . . . . Barry Schwartz 8-65
Low frequency sine wave crystal oscillator . . . . . Richard S. Baggett 4-88
Make a crystal-controlled clock with DTL gates . . . . . Richard Juengel 1-70
Man-machine interface circuit . . . . . Alphonso H. Marsh, Jr. 11-52
Midvalue selector doubles as a precise voltage limiter . . . Adrian Moses 12-61
Minimum hardware decade counter . . . . . M. V. Pitke 9-84
Next pulse synchronizer . . . . . Don M. Evans 8-68
Noise-insensitive monostable multivibrators . . . . . E. G. Faris 6-110
One-shot trigger on both edges of input . . . . . Ken Erickson 4-92
Op amp makes unique one-shot . . . . . Maxwell G. Strange 4-88
Op amp phase shifter for 0 or 180° . . . . . Irwin Cohen 4-92
Oven temperature controller . . . . . S. W. Billingsley 11-53
Pulse rate filter . . . . . Quon S. Chow 8-65
Regulated supply has two outputs . . . . . Don Purland 1-69
Ripple counter has fixed delay for any count . . . . . S. S. Golenski 7-75
Simple high duty cycle one-shot . . . . . Parviz Ghajar 7-72
Simple one-shot multivibrator . . . . . C. Musquetier 3-84
Simple priority detector . . . . . Bill Wiley Smith 9-84
Simple square wave generator uses one IC . . . . . Henry D. Olson 10-66
Simple word gate circuit . . . . . W. K. Lenhardt 7-75
Sine wave oscillator has logic level output . . . . . Walter G. Jung 9-85
Single-pulse generator steps digital systems . . . . . Jeffrey Lowenson 2-78
Stable squarewave generator . . . . . Arnold J. Steinman 1-67
Super-simple square-wave generator . . . . . Paul Franson 6-113
A sure start square wave oscillator . . . . Jack Cramer and Ed Matsumoto 12-60
Switching-mode heater control . . . . . Dennis R. Morgan 2-78
Threshold testing too tedious? Automate . . . . . R. K. Repass 1-70
Triflop - A three-state memory element . . . . . Anatole Turecki 5-68
TTL compatible lamp driver . . . . . Hal Koester 4-90

IC ideas (cont'd)

Variable-modulus counter	Ron Kostenbauer	2-79
Versatile triangle wave generator	Adrian Moses	11-53
voltage regulator has extended range, remote shutdown.	Walter G. Jung	1-66
Zero input impedance preamp	Albert E. Hayes	4-90
